

- HOUSE (address, surface_area, num_rooms, seller_price) KEY: address
- SELLER (name, surname, telephone_number, real_estate_company) KEY: name
- NEIGHBORHOOD (name_neighborhood, num_inhabitants) KEY: name_neighborhood

If a law firm has a client it's because
it has at least one case, so we put a (1, N)

We can't know if a
solicitor
has a case or not, so
we put (0, M)

- CASE (file_number, start_date, completion_date, status) KEY: file_number
- CLIENT (id, name, surname, address, phone_number, email) KEY: id
- SOLICITOR (name, id, surname, address, telephone, email) KEY: id

- EMPLOYEE (id, full_name, address, telephone) KEY: id
- PROJECT (code, title, estimated_duratio, real_duration, budget) KEY: code
- DEPARTMENT (name) KEY: name
- CLIENT (cif, name, sector) KEY: cif
